We recently trialled wallreform a BBA certified thermal remedial plaster after we installed a dpc on a very old stone building in Farndale North Yorkshire.

We hacked off the old plaster that was excessively thick in some areas upto 110 mm in thickness overall about 70 mm.

We were amazed at how quickly we got the product applied and to the required thickness.

Nearly 40 m2 on in a day which would have taken us days with any other product such as sand and cement render due to numerous coats that would have been required. We skimmed day after, which Also coated excellent ,

We would certainly be more than happy to recommend to any company and are also happy to be contractors in the North East region.

We are happy to act as sub contractor who require this product to be applied for any project in the Northern regions
